PROFESSIONAL SUMMARY

Computer Engineering graduate with a strong academic background and diverse hands-on experience in software development, cloud environments, and information systems. Equipped with C/C++ and Python programming skills, modern development practices, and hands-on exposure to developing scalable applications, automation tools, and data-driven systems. Experienced in the design and implementation of end-to-end projects, including cloud-based solutions and AI-powered tools, while showing strong analytical thinking, teamwork, and problem-solving abilities. Self-motivated, fast-learning, and committed to continuous growth in technical, engineering, and multidisciplinary environments.

EDUCATION

Bachelor of Computer Engineering | 2021-2025 |Ruppin Academic Center

- **Dean's List**: 2022/2023, 2023/2024, 2024/2025.
- **GPA:** 87

Relevant Coursework and Achievements:

Algorithms (95),Data structure(100), Digital Signal Processing (91), Machine Learning and Data Science (83), Computer Architecture (90), Operating Systems (86), Compilation and Translation (87), Microprocessors (88), VHDL Design (100).

PROJECTS

Dual-Factor Access Control System (Face & RFID)

Developed a smart access control system integrating Python, ESP32, and OpenCV for real-time face recognition and RFID authentication. Designed a reliable communication flow between devices and implemented a secure user management interface.

Sign Language Translation Tool (Python)

Developed a real-time system that translates American Sign Language (ASL) gestures into text. Using a QDA classifier, the system accurately recognizes static hand signs and converts them into readable output. It was designed to help people with hearing impairments communicate more easily and effectively.

7-Boom FPGA Game (Verilog)

Implemented game logic and designed user interaction components on FPGA, applying debugging and timing analysis principles.

WORK EXPERIENCE

Security Shift Supervisor | NVIDIA, Israel | 2021–Present

- Managed security operations across all Israeli sites, ensuring 100% operational compliance.
- Led a team of security officers to enhance physical security.
- Addressed operational challenges through effective problem-solving and communication.

SKILLS

Programming Languages: C, C++, C#, Java, Python, MATLAB, Verilog

Software Development: OOP, Design Patterns, Version Control (Git), Agile, Testing & Debugging.

Backend & Tools: SQL, Linux, Visual Studio.

Additional: Team collaboration, problem-solving, and continuous learning mindset.
